

Mehrun-Nisa Raja

UX/UI DESIGNER

Surrey, BC | mra140@sfu.ca | +1 604-724-6457 | linkedin.com/in/mehrunnisa-raja

SUMMARY

UX/UI Designer with an MSc in Interactive Arts & Technology (SFU) and a research-driven, user-centered approach to product design. Experienced in usability testing, user research, wireframing, and prototyping, with a technical background (HTML, CSS, SQL) that supports close collaboration with engineering teams. Skilled at translating user insights into intuitive, engaging interfaces and collaborating across research, design, and engineering teams.

SKILLS

- UI/UX Design • Wireframing & Prototyping • Usability Testing • UX Research & User Studies
- Interaction Design • Competitive Analysis • Figma • Framer • Adobe XD • Design Thinking
- HTML • CSS • SQL
- Gamification Design • Leadership • Mentorship • Cross-functional Collaboration

EXPERIENCE

UI/UX Designer Intern | HomeVism

- Conducted usability testing sessions to identify pain points and inform iterative interface improvements.
- Designed and implemented UI improvements based on user feedback and testing outcomes.
- Performed competitive analysis of comparable products to benchmark design patterns and identify opportunities.

Research Assistant | SIAT, Simon Fraser University

- Conducted user research and usability studies to evaluate interactive and gamified systems, translating findings into design recommendations.
- Analyzed user engagement and behavioral data to inform interface and interaction design decisions.
- Contributed to user engagement frameworks used to guide the design of interactive applications.

Teaching Assistant | SIAT, Simon Fraser University

- Taught and mentored students in Web Design & Development and Information Design coursework.
- Guided students through UX principles, front-end implementation, and design thinking methodology.

PROJECTS

- D-GAM — Designed and user-tested an adaptable interactive system framework, applying iterative research and evaluation methods across multiple contexts.
- Lineup — Led the end-to-end user research process and design for a mobile app that helps users find and search nearby sports activities, from discovery research through to interface design.
- Object Detection System — Contributed to an ML-based detection system with real-time alerting, supporting front-end/interface integration.

EDUCATION

- MSc, Interactive Arts & Technology — Simon Fraser University (2023–2026)
- BSc, Computer Science — Bahria University (2018–2022)
